

The Mystery of the Black Pond

Gorges et plateaux de la Haute-Dordogne - Saint-Victour

(J. Matthiaud)

The architecture and heritage of Saint-Victour and its mysteries

Water is the principal landscape element on this hike. But before reaching the Etang Noir, the woodland and undergrowth and its delicious freshness will quickly reveal the charm of this route. Birdsong, a few stone walls and an old bread oven will guide you to the banks of the pond. Peaceful and green, l'étang Noir, the Black Pond is an invitation to rest and daydream, for those who would like to imagine themselves walking on this mysterious island...

Useful information

Practice : Pedestrian

Duration : 2 h 30

Length : 7.7 km

Trek ascent : 208 m

Difficulty : Medium

Type : Loop

Themes : Lakes and rivers

Trek

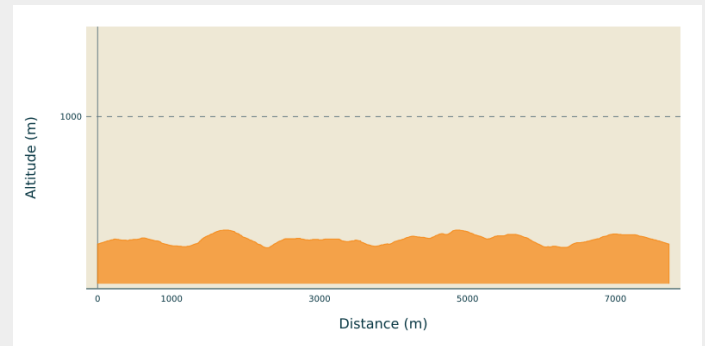

Departure : In front of the church, Saint-Victour

Arrival : In front of the church, Saint-Victour

Markings : — Yellow markers

Cities : 1. Saint-Victour

Altimetric profile

Min elevation 636 m Max elevation 685 m

1. Departure from in front of the church. Go back to the D 979. At the crossroads, turn left and go along the departmental road. 200 metres further on, turn right onto a slightly sloping path. A few metres further on, at the Y-junction, go straight on, ignoring a path on your right. After having crisscrossed the undergrowth, the route leads to a trail lined with dry stone walls.
2. At the crossroads, turn left, leaving a farmhouse on the right. The path goes down in a valley then skirts the edge of a wood. At the intersection, turn right and go through the village of Barbazanges.
3. At the crossroads, turn left. 30 metres further on, bear right onto the track. At the next two intersections, turn right until you reach some buildings. Continue straight ahead until you reach the road, then turn right, leaving a farm on the left. At the junction after the house, turn left to join the path to l'étang Noir.
4. Go around to the left of the lake. Cross the dike. Continue as far as the road and turn left to return to the D 979 passing in front of the town hall of Saint-Victour. Cross the departmental road and go down to the church.

On your path...

Church and Château of Saint-Victour (A)

As can be seen from the choir covered by a cul-de-four (half-dome), the church of Saint-Victour is of Romanesque origin. However, it was reworked several times, in the 13th, 14th and 15th centuries.

The château, the oldest parts of which seem to date back to the 15th century, comprises two main buildings built at right angles. The north building was flanked by two circular towers, which were demolished during the Revolution. The second dwelling to the west was also flanked by a large tower.

Barbazanges (B)

Once you arrive in this hamlet, you will see an old traditional bread oven. A few steps further on, a sweeping panorama reveals a wetland, under which the sources of the Étang Noir are hidden.

Etang Noir (C)

Water is the commune's principal resource. Omnipresent, it was used for fish farming and as a source of energy (Saint-Victour had many mills). Then between 1925 and 1927, the Chaumettes dam was built.
